Subject: Microsoft

Dear Sirs

I find myself compelled to write to you with a mixture of frustration, anger and disappointment. I am shocked to witness our judicial system and government failing to do justice on behalf of the people and companies they represent. If there ever was a monopolistic and criminal company, it would have to be Microsoft.

Not only is our government failing to punish Microsoft, the government may be helping it expand its monopoly into areas such as education, which they do not control, at the expense of other companies and us all. A recently published statistic gives Microsoft over 96% of the market share, this "alone" should compel you in favor of a brake up. How can individuals and the market benefit? How can there continue to be diversification, innovation and competition? Please pause for a moment...96%!!!

It is time to stop "compromising". It is my hope to see this latest proposed settlement be rejected in favor of a severe and just solution. Microsoft is a "monopoly" and is using its vast resources to squeeze, or acquire, other companies out of business and penetrate new markets with unfair and criminal business practices.

Microsoft's latest business and private licensing fees reflect its arrogance and dominance in the market place. Do the right thing and punish Microsoft, nothing less than a "brake up" will do.

Thank you,

Piero Favretti
